

Comment RE:RM-10740. Gentlemen I would hope that you will dismiss This petition. I am of the understanding it was filed by a small group of operators that are against the spirit of experimentation on the ham bands. From what I've experienced it appears that at many times if there is a problem at all it is perceived due to the receive operators equipment.

It would appear that this issue could be better managed by a sub-band re alignment that would increase the spectrum available for all phone modes (as in many other parts of the world). With more spectrum available for phone I don't believe this petition would have ever come before you.

Sincerely, David M. Antler W9AD
